

**IN THE CLAIMS****Listing of Claims:**

Claims 1-16 (cancelled).

Claim 17 (currently amended): A method for retrieving a document and for transmitting back, the identifying data of a party accessing or making a copy of a document transmitted through a two way telecommunications system, comprising the steps of:

transmitting a document from a systems device through a two way ~~telecommunications~~ communications system to an address of a presentation device;

storing said document in said presentation device;

as a first step in accessing a copy of said document, inputting at said presentation device, identifying data indicative of the identification of a party accessing the document;

as a second step in accessing a copy of said document, without authentication and directly responsive to receiving said identifying data, producing a print command;

as a third step, producing a copy of said document, in direct response to said print command, and

as a fourth step, producing a record of said ~~the~~ identifying data used to produce said print command, and transmitting said record.

Claim 18 (previously presented): The method of claim 17, wherein said identifying data is in a predetermined format and said step of producing said print command includes the step of producing said print command in direct response to receiving said identifying data in said predetermined format.

Claim 19 (currently amended): The method of claim 18, wherein said predetermined format is ~~[[the]]~~ a VCard format.

Claim 20 (currently amended): The method of claim 19, wherein said steps of producing a record and ~~a transmitting said~~ transmitting said record includes the step of producing

and transmitting a record of ~~said identifying data with~~ at least one of a time, a date, and a location of access to excess data.

Claim 21 (cancelled).

Claim 22 (currently amended): A computer readable media comprising programming instructions for performing the method of retrieving a document and for transmitting back, the identifying data of a party accessing or making a copy of a document transmitted through a two-way telecommunications system, the computer readable media comprising the programming instructions of:

- transmitting a document from a system through a two way ~~telecommunications~~ communications system to an address of a presentation device;

- storing said document in said presentation device;

- as a first step in accessing a copy of said document, inputting at said presentation device, identifying data indicative of the identification of a party accessing the document;

- as a second step in accessing a copy of said document, without authentication and directly responsive to receiving said identifying data, producing a print command;

- as a third step, producing a copy of said document, in direct response to said print command, and

- as a fourth step, producing a record of said ~~[[the]]~~ identifying data used to produce said print command, and transmitting said record.

Claim 23 (cancelled).

Claim 24 (new): A device for notifying a designated party of remote output by a recipient, the device comprising:

- an address;

- a receiver for receiving a file from a remote system sent to the address;

- an input for entering identification information of a user receiving the file from the receiver;

- an output for sending the file to an output device as a direct response to the entry

of the identification data and without authentication; and  
a transmitter for sending a notification of the output of the file to the output device and the identification information of the user to at least one designated party.

Claim 25 (new): The device of claim 24, wherein the at least one designated party is a party sending the file to the address of the device from the remote system.

Claim 26 (new): The device of claim 24, wherein the file comprises data identifying the at least one designated party.

Claim 27 (new): The device of claim 24, wherein the notification includes at least one of a date the file is sent to the output device, a time the file is sent to the output device, and a location of the output device where the file is sent.

Claim 28 (new): The device of claim 24, wherein the input is at least one of a smart card reader, an ibutton reader, radio frequency ID reader, and a java ring reader.
